                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be generated and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be appeared.

Anderson, S., Baldwin, J., Barna, N., Consensus quality interest significant of the second of th NOTE: This is a 'working draft' sequence. It currently consists of 62 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. Assembly program. Phrap: version 0.990339
Consensus quality: 17263 bases at least 0.40
Consensus quality: 171067 bases at least 0.20
Consensus quality: 17131 bases at least 0.20
Consensus quality: 17224 sum of contigs estimation
quality coverage: 0.0x in 0.20 bases; suprof-contigs estimation
quality coverage: 0.0x in 0.20 bases; suprof-contigs estimation

NOTE: Estimated insert size may differ from sequence Length (see http://www.hgsc.tom.tor.edu/docs/Genhank_draft_data.html) NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the piece consists of 5 contigs. The true order in this sequence record is

arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

as soon as it is available and the accession number will be preserved.

is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_datm.html). NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces
as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                       corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence is the entire insert of clone 512B11. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           requests: clonerequestésanger.ac.uk
On Aug 5, 1998 this sequence version replaced gi:3355573.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                           This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. The EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful blood(ea. activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities in all animals of the suppression activity, animals stimulating or suppressing activity, activin/inhibit activity, chemosatic/chemokinetic activity, haemosatic activity, and the suppression activity, and the suppression activity, and the suppression activity, the suppression activity, the suppression activity, and the suppression activity, the suppression activity.
Human: 5' EST; expressed sequence tag: secreted protein; diagnosis; gene therapy; chromosome mapping; upstream regulatory sequence; forensic; location; development; protein synthesis; stability;

Mouse liver growth hormone-induced cDNA clone 5,

SEQ ID NO:7

```
involves correlating the level of expression of certain specific genes with the level of GH activity in the liver, or with an expected change at the condition of the liver as the result of GH activity. Excessive GH artivity in the liver as the result of GH activity. Excessive GH art the condition of the liver as the result of GH activity. Excessive GH art the condition of the liver as the result of GH activity. Excessive GH art the condition of the liver size as a a consequence of both hyperplasia and the paccoyte hypertrophy, and hepatocollular lesions which progress with age. Studies in transgenic mice which express high levels of bovine growth hormone identified a number of genes whose expression in the capture of the liver is altered by high GH levels. The genes which are upregulated are those encoding alpha-fetoprotein, corticosteroid binding globulin, corticosteroid binding globuling growth hormone corticosteroid binding globuling growth hormone corticosteroid binding globuling growth hormone growth hormone processor, cone 5 (AAG9725) and clone 45 (AAG97258) are also upregulated corticosteroid binding globuling growth hormone growth binding growt
                                                                                                                                                                                                                                                                                                                                                                                                     comprising administering the drug to the transgenic animal; and preventing or treating a liver pathology in a patient comprising administering a drug which inhibits the expression of a GH-induced gene. The method of the invention is used for diagnosing abnormal levels of the activity in the liver or predicting a chape in the condition of the liver or predicting a chape in the condition of the liver of predicting a chape in the condition of the liver in response to abnormal levels of GH activity. The GH-regulatable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       isomerase appears to be downregulated. The invention also relates to transgenic nonhuman mammals comprising a GH-induced transgene which exhibit or have a propensity to develop a liver pathology; an assay for drugs which inhibit the development of, or which treat a liver pathology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of diagnosing abnormal levels of growth hormone (GH) activity in the liver, or predicting a change in the condition of the liver in response to abnormal GH activity. The method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 51-52; 65pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Diagnosing abnormal levels of growth hormone activity in liver comprising assaying growth transcriptional activity and protein expression level of hormone-regulatable liver genes, as disgnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-007239/01.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mouse: growth hormone; GH regulatable gene; liver pathology, hypertrophy; hepatocellular lesion; hyperplasia; altered expression level; clone 5; diagnostic marker; gigantism; acromegaly, diabetes; hepatotropic; transgenic animal; drug screening; drug discovery; murine; ss.
                                                                                                                              liver genes and proteins are useful as diagnostic markers of liver pathology. Assays for the expression of these genes is useful for the diagnosis of liver pathologies associated with gigantism or acromegally with diabetes, as other causative agents may act directly or indirectly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kopchick JJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (UYOH-) UNIV
                                                                    upon the same genes. The present sequence represents the novel mouse
cDNA clone 5, expression of which is upregulated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of liver pathology

                                                                                                                                                                                                             The present sequence represents the complete genome of :ilamydia trachomatis open reading frames (ORES) of the genome encode polypeptides ANY50754-Y3794) The polypeptides can be used as warcines against Chlamydia trachomatis. Antisense and riboxyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendefact trachoma, paratrachoma, and inclusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vaccine; eye disease; conventional trachoma; nonendemic trachoma; nonendemic trachoma; nonendemic trachoma; nonendemic trachoma; nonendemic trachoma; noculation condjunctivitis; certicitis; salpingitis; certicitis; salpingitis; certicitis; salpingitis; harpholocitis.

Plants may be genetically marked for identification by introducing a DNA sequence into the plant genome. The DNA sequence is at least 100 base pairs, is unique in the genome, and does not contain a sequence that alters transcription or encodes a functional protein. The sequence is readily describing and retrievable. The method is useful for tracking or identifying the distribution of

                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention are all secreted so the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predeted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities animals although no supporting data is given. Suggested activity, hazamatopolesis regulating activity, the mane stimulating or suppressing activity, activity, this cativity, chemoactic/themokinetic activity, hazamatory activity, cadherin/tumour invesion suppression activity, antimour inhibition activity, activity, activity, activity. Segmences are also stated to be useful for gone activity. The EST sequences are also stated to be useful for gone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotides encoding human secreted proteins - derived from

New gene encoding proteins designated M010, M019, M024, useful for the diagnosis, prophylaxis and treatment of cancer, obesity, diabetes, osteoporosis, asthma, atherosclerosis and pulmonary disorders

Claim 1; Fig 2; 98pp; English.

The present invention relation relates to novel human coding sequences and proceins designated MOIO (AAF32082 and AA666881), MOI9 (AAF32084 and AA666895), MOI9 (AAF32084 and AA666895), MOI0 (AAF32086 and AA666895), MOI0 (MOI) and MOI4 (Proceins and compounds which modulate their activity or which bind MOI0, MOI9 and MOI4 proceins and compounds which modulate their activity or which bind MOI0, MOI9 and/Or MOI4 are useful for prevention and treatment of a variety of disorders including concer, obesity, disbetes, osteoporosis, astima, only the second of the s central and peripheral nervous system disorders, pain, stroke, chronic obstructive pulmonary disease, hypercholesterolæemia, hyperiphdæmmia, hyperiphdæmia, byperiphoproteinemia, atheroscierosis, arterioscierosis and coronary artery disease. The present sequence is the coding sequence for human

                                                            This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number is given in the descriptor line. The gene can be used to generate fusion proteins by linking to the generate a human immunoglobulin FC portion (e.g., AAZGGZI), for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 36 novel genes and their fragments (Anglez) which are useful for preventing, treating our aneitorous the second conditions e.g. by protein or gone therapy. Also, pathological conditions e.g. by protein or gone therapy. Also, pathological conditions e.g. by protein or gone therapy. Also, pathological conditions can be dispussed by determining the amount of the new polymortlectides. Specific uses are described for each of the 16 polymortlectides, hased on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cognitive disorder; schizophrenia; prostate: obesity, osteoclast; thymus; osteoporosis; arthritis; leastis, lung; thyroiditis; thyroid; dispestion; endocrine; metabolism; regulation; malabsorption; gastritis; neoplasm.

The detection method involves isolating genomic DNA from this bacterium, digesting it with Hindill restriction enzyme, and identifying clones capable of bloding to the bacterium then isolating and sequencing the Hindill fragments involved. The probes have sequences KP-77-45 KMP-80-27 KMP-98-33 and KMP-110-32. The probes allowing involved the probes allowed the supply and highly specific detection of Klebsiella pneumoniae in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method of diagnosing abnormal levels of condition activity in the liver, or predicting a change in the condition of the liver in response to abnormal GH activity. The method condition of the liver in response to abnormal GH activity. The method the condition of the liver in response to abnormal GH activity. The method of the condition of the liver as the pression of cortain specific genes with the level of GH activity in the liver as the result of GH activity. Excessive GH activity in the liver as the result of GH activity. Excessive GH activity in the liver as the pression to Health, coursing an increase in liver streams a consequence of both hyperplasia and conceptority and hepatocellular lesions which prograss with the prograss with the prograss with depatocyte hypertrophy, and hepatocyte lular lesions which prograss with depatocyte hypertrophy, and namber of genes whose expression in the color studies in transgenic mice which express high levels of bowling globulin, and conding a half-aftebrottein, corticosteroid binding globulin, continue decreased by high GH levels. The genes which are upregulated are those encoding alpha-feta-prottein, corticosteroid binding globulin, continue decreased by high GH levels. The genes which are also updated the complete to abnormally high GH levels. Conversely, expression of the commerce to abnormally high GH levels. Conversely, expression of the commerce of northwan means of a GH levels. Conversely appears to be downregulated. The invention also relates to
                                                                                                                                                                                                                                                                                                                                           Align seg 1/1 to: AAC87258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   rransgoric monhuman mammals comprising a GH-induced transgene which exhibit or have a propensity to develop a liver pathology; an assay for drugs which inhibit the development of, or which treat a liver pathology, comprising administering the drug to the transgenic animal; and preventing or treating a liver pathology in a patient comprising administering a drug which inhibits the expression of a GH induced gene. The method of the invention is used for diagnosing abnormal levels of GH activity in the liver or predicting a change in the condition of the liver in response to abnormal levels of GH activity. The GH-regulatable liver genes and proteins are useful as diagnostic markers of liver pathology. Assays for the expression of these genes is useful for the pathology. Assays for the expression of these genes is useful for the pathology. Assays for the expression of these genes is useful for the pathology. Assays for the expression of these genes is useful for the light of the pathology. The constitution of the light of the pathology is a solution of the constitution of the light of

```

New isolated nucleic acid molecule encoding a SRT polypeptide for production of recombinant SRT polypeptides, gene mapping, diagnosing genetic disorders and for gene therapy. WPI; 2001-112729/12 Baker KP, 26-JUL-1999; 21-JUL-2000; 2000WO-US20006 01-FEB-2001 W0200107611-A2 Homo sapiens. (GETH) GENENTECH INC Goddard A, 99US-0145701 Wood WI is useful

Sequences ARP93180 · ARP93743 represent polynucleotide sequences encoding human SRT proteins. The cDNA sequences are isolated from various different human tissue cDNA libraries. The invention relates to a method Claim 2; Fig 525; 663pp; English.

for detecting cDNA encoding an SRT protein, a vector containing cDNA encoding SRT, a host cell transformed with the vector, an isolated SRT polypeptide, and an antibody which binds to SRT. The polyvucleotide sequence can be used in gene therapy and is useful in the recombinant production of SRT polypeptides, as a hybridisation probe to screen libraries to isolate cDNAs with sequence identity to SRT polypeptides, map the gene encoding the SRT polypeptides and analysing genetic disorders, tissue typing and disease tissue detection. The SRT polyperide can be used in polymerase chain reaction, acreening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for new therapeutic molecules and generation of antisease RNA screening for the screening for new threatening for the screening for the screeni RNA č

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ANIS2304 to ANIS3970 represent nucleic acids (I) encoding polypeptides (II), given in ANG81434 to ANG83120, from staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the s. epidermidis polypeptides (II) (I) with the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to acids produce the subjects and the raise antibodies against the bacteria. The polypeptides and the raise antibodies against the bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         treatment of S. epidermidis infections, e.g. endocarditis, AMH33971 to AMH35090 represent specifically claimed S. epidermidis genomic DNA polynucleotide sequences from the present invention. AMH35091 to AMH35090 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention.

N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEO ID NO:4454 so even though sequences are given in the disclosure for SEO ID NO:4465 to 4472, no sequences are given in the disclosure for SEO ID NO:4465.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 8; Page 774-775;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis -

                                                                                                                                                                                                                                               (ARDS), Rheumatold arthritis, osteoarthritis inflammatory Boxal Disease (IBD), psoriasis, dermatitis, asthma, allergies, becterial, fungal, protozoan and viral infections, especially those caused by HV-1 or HIV-2; HIV-associated cachaxia and other immunodeficient disorders; septic shock; pain, injury; cancers; anorexta; builmia; Parkinson's disease; cardiovascular disease including restenosis, abressorias disease; cardiovascular disease inflating restenosis, bypertension; urinary retention; angina pectoris, ulcers; benign prostatic hypertrophy; urinary retention; angina pectoris, ulcers; benign prostatic hypertrophy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptide (PTLAR3). Host cells transformed with an expression vector comprising the HTLAR3) nucleic acid are used for the recombinant production of the protein. PTLAR33 polymucleotides and polypeptides are useful for diagnosing susceptibility to diseases and for screening for antagonists, agonists. Phase can be used in treatment to enhance (agonist) or block (antagonist) PTLAR33 activity. Diseases diagnosed prevented or treated include: bone loss and inflammatory disorders including osteopprosis, Adult Respiratory Disease Syndrome
                                                                              and psychotic and neurological disorders, including schizophrenia, manic depression, anxiety; delirium, domentia, severe menual retardation and dyskinesias, such as Huntington's disease or Gilles de la Touretto's syndrome. HTLAR3 polypeptides are also useful for mapping openes to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polynucleotides - useful as diagnostic reagents and for prevention
and treatment of bone loss, neurological and inflammatory disorders
and cancer, HIV infections and angina pectoris
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Inflammatory disorder: osteoporosis; Adult Respiratory Disease Syndrome, arthritis, peoriasis, dermatitis, astima; a latery; infection; HIV-1 arthritis; cachesia; immunodeficient disorder; septic shock; pain, injury; cancer; ancrexia; bulinia; arkinspor's disease; caddovascular disease; neurological disorder; Huntington's disease; den therapy; gene mapping;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAX17775 standard; cDNA; 1338

                                                                                                                                                                                                                                                      The invention relates to a method for monitoring oil contamination of sea water by detecting in the sea water, a microbe having the following properties; (1) it has no flagelium; (2) it is a Gram-negative batterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30 cm alkanes. This sequence tepresents a fragment of the 16S rDNA gene from the microbe of the inventors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  845

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method for monitoring oil contamination of sea water by detecting in the sea water, a microbe having the following properties: (1) it has no flagelium; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it efficiently assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 16s TDNA gene from the microbe of the inventions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Monitoring of oil contamination of sea water - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to

                     Probe #4846 used to measure gene expression in human placenta sample
                                                                                               AAI36160 standard; DNA; 1966
                                                                                                                                                                                                                                                                                                                                                                                                           specification, but was obtained in electronic format directly from WIPO
at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                              microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human single exon nucleic acid protes (SBNP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 25;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2001-488901/53
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                04-OCT-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         04-FEB-2000;

                                         The present invention relates to single exon nucleic acid probes in the present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying ge expression in samples derived from human placents. The probes are for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-FEB-2000;

The present sequence is one such probe The probes are useful for measuring human gene expression in a human breast sample, where the prol mybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, steaping, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the hreast fiberouries for the breast fiberouries and prognosing diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polypeptide (HTLAR3), Host cells transformed with an expression vector comprising the HTLAR3) nucleic acid are used for the recombinant production of the protein. HTLAR3 polymucleotides and polypeptides are useful for are useful for diagnosing susceptibility to diseases and for screening for antagonists, agonists. These can be used in treatment to enhance (agonist) or block (antagonist) HTLAR33 activity. Diseases diagnosed, prevented or treated include: bone loss and inflammatory disorders including osteoporosis, Adult Respiratory Diseases Syndrome (ARDS), Rhumatoid arthrits, osteoarthritis, Inflammatory Bovel Disease (ARDS), Rhumatoid arthritis, asthma, altergies; bacterial, fungal, [199].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New serine-threonine kinase (HTLAR33) polypeptides and polynucleotides - useful as diagnostic reagents and for prevention and treatment of bone loss, neurological and inflammatory disorders

                                                                                                                                                               AA16618 to AAA1697 encode the human secreted proteins given in AAV94898 to AAV94980, isolated from human adult brain, adult thyroid, adult retina, feetal carcinoma, adult boods, adult neural, feetal kidney, adult placenta, adult testins, whole embryo, adult cartilage, kidney, foetal brain, adult thymms, feetal placenta, adult therus, adult thour and adult bladder, cDNA libraries. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. The polynucleotides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight which the protein is preferentially expressed, as molecular weight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wong GG,
                                                                       markers on Southern gels, and as chromosome markers or tags to identify chromosomes or to map gene positions. The proteins can be used in the trontmont of immune deficiencies and disorders, such as severe combined immunedeficiency (SCTD), as well as viral, bacterial, fungal and orther infections. These infections include human manunodeficiency virus (HTV),
erythematosis, rheumatoid arthritis, autoimmune pulmonary inflammation
                  as connective tissue disease, multiple sclerosis, systemic lupus
                                     hepatitis, herpesviruses, mycobacteria, Leismania spp., malaria and candidiasis. The proteins can be used to treat autoimmune disorders such
                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotides encoding secreted proteins, which may have e.g. nutritional, chemokine, immune stimulating or suppressing, hematopolesis regulating, tissue growth, activin/inhibin antiinflammatory or tumor inhibition activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Jacobs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-SEP-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-AUG-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13-AUG-1999

            AMB52304 to AMB5370 represent nucleic acids (I) encoding polypeptides (II), given in AMB3170, from StapPylococcus epidermidis.

(I) and (II) can have antibacterial activity and therefore can be used (II) can contain the nucleic acids (I) may be used to produce the secondaining them which are used to produce hosts calls which express the containing them which are used to produce hosts calls which express the cused to vacchate subjects and to raise antibodies against the bacteria. The polypeptides (II) (and/or nucleic acids) may then be used to vacchate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used for the activity and therefore identify compounds that may be used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Align seg 1/1 to: AAA16647

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              _documentation_block:
                                                       AMB52304 to AAH53970 represent nuclaic acids (I) encoding polypeptides (II), given in AAG811454 to AAB831120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the s. epidermidis polypeptides (II) yia the production of vectors containing them which are used to produce hosts cells which express the polypeptides if the product of vaccinate subjects and to raise antibodies against the bacteria used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e. 9, endocarditis. AAH53971 to AAH55990 represent specifically claimed S. epidermidis infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N.B. The present invention specifically claims all the polymoclectide sequences given in the sequence listing of the present specification however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4455 to 4472, no sequences are present for SEQ ID NO:4455 to 4464.
polynucleotide sequences from the present invention. AAH55091 to
AAH55098 represent oligonucleotide sequences and primers which are used
in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Staphylococcus epidermidis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-SEP-2001 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N.B. The present invention specifically claims all the polymocleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4454 to 4472, no sequences are present for SEQ ID NO:455 to 4464.

polyapptides The polyapptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polyapptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g., endocardits. AMH5391 to AMH55090 represent specifically claimed S. epidermidis genomic DNA polyappties esquences from the present invention. AMH55091 to AMH55098 represent oligonucleotide sequences and primers which are used AMH55098 represent oligonucleotide sequences.

in the exemplification of the present invention

in vaccination. The nucleic acids (1) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the AMB52304 to AAH53970 represent nucleic acids (1) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis (1) and (II) can have antibacterial activity and therefore can be used Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis -

The present invention specifically claims all the polymiclectide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEO ID NO:4454 so even though sequences are given in the disclosure for SEO ID NO:4455 to 4472, no sequences are present for SEO ID NO:4455 to 4464.
                                                                                  Novel nucleic acids and peptides derived from open reading frame useful for treating e.g. cancers, proliferative disorders,
